John Heath, The Heath Family Engravers 1779-1878

Robert N. Essick

Blake/An Illustrated Quarterly, Volume 28, Issue 2, Fall 1994, pp. 67-71

Reviewed by ROBERT N. ESSICK

**Query:** Identify the English line engraver who was born in 1757, established his early reputation by engraving Thomas Stothard’s illustrations for *The Novelist’s Magazine*, published his own separate prints and illustrated books, signed a testimonial for Alexander Tilloch’s method to prevent banknote forgeries, used several innovative graphic techniques including a relief-etching process, and engraved a large panorama of Chaucer’s pilgrims on their way to Canterbury? Choose one: a. William Blake  

b. James Heath  

c. both of the above

As any good test-taker can guess, the answer is c. A few of these parallels in the lives of Blake and Heath are historical accidents, yet several indicate that some of the more striking features of Blake’s career are not singular eccentricities but responses to imperatives felt by others in his profession. To publish one’s own prints, or books of prints, made sense to both men as a way of eliminating distributors standing between the engraver and the consumer. Self-publishing allowed the artisan to exercise more control over the product and to either lower prices or capture the profits that would normally accrue to another party. Blake began to publish his own prints no later than 1784 during his partnership with James Parker. Heath, somewhat slower off the mark (because more successful as a journeyman?), began to co-publish his prints with J. P. Thompson in 1796 (1: 21). 1 Blake’s plunge into book publishing began with his illuminated books, first produced c. 1788 but not known to have been advertised to the public until 1793. Heath published his edition of Shakespeare, with letterpress text and illustrations by Stothard and Henry Fuseli engraved by Heath, in 1802 (1: 23). Besides these attempts to alter the normal patterns of print distribution, both engravers tried to keep up with, or leap ahead of, innovations in print production. Heath never indulged in anything as radical or unfashionable as relief or white-line etching, but he did develop new techniques for stipple engraving (1: 10) and co-

1 Parenthetical references (by volume and page) are to the book under review.

published the first British lithographs in 1803 (1: 24). 2 Both men sought a commercial success with their Chaucer engravings—Blake’s after his own design, Heath’s after Stothard (illus. 1). As in so many of their other endeavors, Heath was the better businessman, although he too fell upon hard times late in life.

The preceding excursion into career comparisons and what they tell us about the economics of engraving is made possible by the publication of *The Heath Family Engravers* by John Heath, a retired British diplomat and the great-great-grandson of James. The book is no mere family memoir, but a work of dedicated historical scholarship. Like his artistic forefathers, the author is all business—at least two senses. Facts spill from page after page; indeed, a few family anecdotes, true or not, would have enlivened matters. And most of these facts deal with the business of engraving and publishing. As John Heath is quick to point out, he saw his task as “not so much to assess the claims of the Heath family engravers as artists in their own right as to set them and their activities against the literary, artistic and cultural background of their time, especially as seen through the eyes of their contemporaries” (1: 9-10). The result might be called *Heath Records*, in imitation of Bentley’s *Blake Records*. John Heath is a very reticent author/editor who allows documents to speak for themselves. Even the first two pages of the “Introduction” to volume 1 are a string of quotations with a minimum of editorial glue to hold them together. Such an approach, when applied to an artist about whom (unlike Blake) so little has been published, has both virtues and limitations. *The Heath Family Engravers* offers no rationale for its demands on our attention or a point of view from which undigested facts can be made meaningful. Yet, these two volumes can serve for years to come as a source of information and provide the foundation for studies more dedicated to interpretation.

John Heath has been an assiduous researcher and collector of engravings by the Heath family. Much of his information is based on manuscripts or fairly obscure publications, but in a few instances, one wishes for more thorough documentation. Heath claims, for example, that “by long established custom . . . an engraver was entitled to keep twelve copies of first proofs, or buy in others from the publisher at a discount, and then sell them if he wished to collectors at much higher prices than mere ‘common’ impressions” (1: 42). If this practice was as widespread as Heath implies, then it might explain why some plates, such as Blake’s “Beggar’s Opera” after Hogarth and his “Tornado”

2 In its earliest years, lithography (or “polyautography,” as it was then called) included etching the stone to leave the image in shallow relief. The signature “I Heath se” appears on the lithographed title page to the 1803 *Specimens of Polyautography* (1: 24), and thus Heath was one of the first English artists to use the new process invented by Alois Senefelder in Germany (1: 24).
after Fuseli, exist even today in several impressions of what look like working-proof states.

The two volumes are similarly organized into a cluster of short chapters (such as "The Engraver and His Trade," "James Heath’s Techniques and Relationships," and "Charles Heath’s Contribution to Steel Engraving") followed by a catalogue of engravings by James (vol. 1) and Charles Heath (vol. 2). Unfortunately, there is no “Preface" to explain the organization of the book or the methods of citation used. Odder still is the absence of number or letter designations for the 40 interesting, if rather murky, illustrations. These float in two clusters in the midst of each volume without coordination—indeed, without the means for coordination—between picture and word, even though several of the engravings reproduced are mentioned in the text.

The bulk of both volumes is comprised of the two main catalogues, with much briefer listings for Charles’s sons, Frederick and Alfred, in volume 2. This was clearly a labor of love for the author and is based in large part on his own collection. Information is arranged chronologically in tables, a format that is easy to use but which creates large, unprinted stretches of paper. Could a more economical arrangement have reduced the high cost of the book? Although a good many separate plates are listed, the catalogues are dominated by book illustrations. Only a minimal amount of information is recorded: title, author, publisher, and the artist(s) who designed the illustrations; number, subject (very brief), and binding location of the plates engraved by a member of the Heath family. Measurements are rounded to the nearest centimeter—a rather generous tolerance for small plates. The states of the plates and their inscriptions are not recorded. Each set of tables is designated as a “Catalogue Raisonné." “Handlist” would be a more appropriate title.

While Blake enthusiasts will find the career of James Heath of primary interest, the life of his son Charles should not be neglected. He too had a taste for innovative graphic techniques, as indicated by his execution, in 1820, of the first book illustration engraved on steel (2: 21). Five years later he combined this high-finish medium with the new and popular genre of the annual gift book to produce the first number of The Keepsake. Although the rage for such prettily bound and embellished volumes soon died down, Charles Heath continued to publish his until 1848. While the stylistic distance between The Book of Urizen and The Keepsake could hardly be greater, Blake’s illuminated books and Heath’s annual emerged from a shared economic dynamic that led both engravers to become book publishers. Near the end of his career, Blake contributed a fine engraving of his design, “Hiding of Moses,” to the short-lived annual Remember Me! (1825-26).

The careers of Charles Heath’s two sons, Frederick and Alfred, are dealt with in a single chapter of six pages. They attempted to continue the family profession well beyond its heyday as a major technology for the reproduction of pictorial images. The traditional art of line engraving on metal plates clung to an aestheticized afterlife well into the second half of the nineteenth-century. Yet its demise as a reproductive craft may have been the necessary prelude to the so-called “Etching Revival,” the return to traditional graphic processes as a means of original artistic expression—as it had been for Durer, Rembrandt, and Blake.

I must confess to a predisposition to like any book written by a fellow collector of British prints. I am quick to forgive errors committed by writers of print catalogues in the hope of receiving similar treatment when my own efforts in that genre are scrutinized. I admire from afar the noble tradition of British amateur—in the best sense of the
word—scholars, a group that includes my friends Raymond Lister and the late Sir Geoffrey Keynes. Yet, in a book so dedicated to the recording of fact, we can reasonably demand a higher level of accuracy and consistency than what I have found in John Heath’s work. Everything in the book about California and its citizens is wrong: the Huntington Library is in San Marino, not “Pasadena” (1: 67); the Getty Museum Library is in Santa Monica, not “San Marino” (1: 67); R. N. Essick is the author of William Blake Printmaker, not “Essick, G. N.” (1: 58); London Bridge now spans a ditch dug next to the Colorado River in Arizona, not “Lake Tahoe [10 miles wide, 1645 feet deep] in California” (2: 18). Less amusingly but more dangerously, Heath lists two books by A. C. Coxhead, “Thomas Stothard, R.A., An illustrated monograph (A. H. Bullen, London, 1906)” (1: 57), and “Life of Stothard (1919)” (1: 58). The former is well known to those who study Thomas Stothard; the latter is either a work unknown to any other bibliography I have consulted or a misleading reference to Coxhead’s Thomas Stothard: His Life and Work (London: Sidgwick, 1909). These two entries also indicate Heath’s inconsistency in the amount of information he provides, both in his bibliographies of works consulted and in the catalogues of books with plates by the Heath family. Such habits can create confusion or at least force the reader to guess at what is actually meant. The sixth footnote to chapter 3 in volume 1 refers to “Graves: Boydell, p. 178” (1: 54). There is nothing in the “Bibliography” (1: 57-59) listed under either “Graves” or “Boydell.” Celina Fox, “The Engravers’ Battle for Professional Recognition in Early Nineteenth Century London,” London Journal 2 (May 1976): 3-31, is recorded as though it were a book without date, place of publication, or publisher: “Fox, Celina. The Engraver’s [sic] Battle for Professional Recognition in Early Nineteenth Century London” (2: 74). “Shenstone’s Poems” (1: 140), without further indication of author or title, is apparently a reference to William Shenstone, The Poetical Works (London: T. Cadell and W. Davies, 1798). Need I point out that it is not nice to change the titles of books listed in what purports to be a “catalogue raisonné”? I remain mystified by a book published by “T. Cadell” in 1788 recorded as having the title “Mina.” (1: 106, no author given).

The introductory essays contain some minor errors (e.g., the small Boydell Shakespeare plates are not “identical” in subject to the larger plates [1: 19]) and what would seem to be either a very large mistake or a major Blake discovery. The passage (1: 31) is worth quoting in full:

As for his [James Heath’s] style, he was essentially a realist engraver, who would probably have disagreed with Blake’s assertion as it stands that ‘Engraving varies so much in the means of expressing the same objects that lines become the language of colours (which is the great object of the engraver’s study)’.

Since no other “Blake” is referred to in John Heath’s book, I took this to mean William Blake. I was immediately startled by Blake’s quoted comment; it was not familiar to me and seemed, on the face of it, most unBlakean. A claim that lines should be used to create a “language of colours” goes against the grain of Blake’s ringing statements, in his Public Address and elsewhere, about the superiority of line to color. When and in what context did Blake write a line that might force a major revision in my sense of his aesthetics? A superscript “12” follows the sentence quoted above; this refers us to “Godfrey, p. 47” (1: 53). The only work listed under “Godfrey” in the Bibliography (1: 58) is Richard T. Godfrey’s well-known study, Printmaking in Britain: A General History from Its Beginnings to the Present Day (Oxford: Phaidon, 1978). I can find no such quotation attributed to Blake anywhere in Godfrey’s book. Nor can I find this statement in the Blake Concordance. Another ghost in the making!

Just before reading The Heath Family Engravers I finished another study of late-eighteenth and early-nineteenth century engraving, Morris Eaves’s The Counter-Arts Conspiracy: Art and Industry in the Age of Blake (Ithaca and London: Cornell UP, 1992). The contrasts between these two books could not be bolder: English/American, ama-
teur/professional, critical reticence/critical self-consciousness, praxis/lexis, fact/meaning (the intellectual equivalent of the raw and the cooked?). Unfortunately, there is all too frequently another split, one between inaccuracy/accuracy in the recording of facts. Yet John Heath’s book will be of lasting benefit, even if we can’t believe (or quite figure out) everything he says. Those who read both books can put into practice the lessons in creative contrariety we have learned from The Marriage of Heaven and Hell.

Appendix: Unrecorded Book Illustrations by Thomas Stothard

The Heath Family Engravers includes, in its catalogues of prints by James and Charles, several books with illustrations by Stothard that have not been noted in previous accounts of that artist’s work. These new titles are listed below. Whenever possible, I have supplemented John Heath’s entries with information garnered from other bibliographies or inspection of the volumes. I am grateful to James Stanger for his assistance in searching the Eighteenth-Century Short Title Catalogue (ESTC).

The Bioscope, or Dial of Life (London: John Murray, 1814). According to Heath, the title page (or a vignette on it?) is engraved by Charles Heath after Stothard. No copy seen; Heath’s information based on an unbound impression in the Royal Academy.

Brighton. A Poem. A “Frontispiece” (so inscribed) by James Heath after Stothard, known only from a separate impression (Boddington Collection, Huntington Library) with a 6 March 1780 imprint. The title recorded by John Heath is written in pencil (“Brighton a Poem”) beneath the image, with the second and third words lined through in pencil. This is a rather shaky foundation on which to propose the existence of a book of this title. Not in ESTC.

Bruce, James. Travels to Discover the Source of the Nile, 2nd ed. ([London?]: Longman, Hurst, Rees, and Orme, 1804). According to Heath, 8 pls. by James Heath after Stothard. No copy seen; no Longman ed. listed in NUC or BM cat.

This affordable volume is the only answer to the question: what is the best book-length introduction to Blake the writer for undergraduates and other common readers? It is short, readable, and reliable, and engages in a fresh, engaging, and verifiable manner *The Marriage of Heaven and Hell* and key poems in *Songs of Innocence and of Experience* that every reader enjoys rereading. Particularly admirable is Ferber's plain style and unperplexed account of what Blake was about. Seldom are the interpretations original, which is right, for an introduction, but hardly anything here sounds like a committee opinion. Whereas some other recent accounts are indifferent to the satire in *The Marriage of Heaven and Hell*, Ferber starts with the premise that Blake's work is one and shows clearly how Blake is able to blend into this medley-genre so much that is affirmative, not to be understood as subject to satirical discount. I have a few differences with Ferber's account of *The Marriage of Heaven and Hell* but believe it to be the best 22 page exposition that has been written.

Readers of this journal would have little use for a list of topics that seem to me right or nearly so in Ferber's easily accessible (though unindexed) book. What I shall discuss instead are some neglected considerations that tend to support or occasionally to modify positions on key matters taken up by Ferber. Ferber's skillful exposition (20-24) of the opening poems of *Experience*, "Introduction" and "Earth's Answer," marks an advance in the literature on these *Songs*; see the writings listed at the end of this piece. Save for the essay of Frye and the books of Gillham, it seems as though the Covering Cherub must often have been guiding the expositors both in what they have noted and especially in what they have overlooked. For example, Leader, though many of his readings of later *Songs* are quite good, starts in incoherence. He controverts Hirsch's myth of "The Two Blakes," but then becomes absorbed by the interpretive discrepancies among Leavis, Bloom, Gleckner, Erdman, et al.; consequently, the reader can hardly guess where Blake was supposed to have been coming from. Quite a lot of this kind of criticism predates more recent theoretical engagements in antithetical criticism.

It would seem axiomatic that an introduction to Blake ought to be based on a thorough grasp of a key poem Blake entitled "Introduction" but indeed such accounts have been rare and sometimes so blurred by contradictory interpretations that the common reader might gather that Blake himself didn't understand what he was driving at. After considering some of the ways in which Gleckner's solution for the "two voices" in "Introduction" doesn't quite work, Larrissy (68) settles on the postmodern solution: "Better to say that the poem is completely ambiguous from beginning to end." In a future age, Blake had hoped that Earth would arise and better understanding would prevail.

Except for Gillham, no one has defined the keynote of failed relationships with which Experience begins as well as Ferber: "the Bard's poem has a reply, 'Earth's Answer,' which nullifies the Bard's appeal, or at least reveals the stony ground on which his appeal falls. . . . In *Innocence*, people communicate, they listen and understand; in *Experience*, they give monologues, and they misconstrue each other if they listen at all (20). "What we have in the end is a stalemate between the Bard who commands Earth to arise and the Earth who commands the Bard-as-father to set her free" (24). Though the word "command," which Ferber employs several times, does not precisely describe the rhetorical posture of either the Bard or Earth, the basic idea that it is the failure of communication between them that is, in effect, the essence of Experience is made abundantly clear.

The Bard's call to Earth, in the vocative: "O Earth O Earth return!" is not a "command"; Ferber's alternative formulation, "an appeal," is closer, but rather too depersonalized for the personification allegory in which Earth is about to respond. The Bard's call is an *exhortation* that has nothing essentially or oppressively patriarchal about it, though the authorial introduction within the poem employs a unit of vocabulary the echoes of which may have served to mis-
